

A Research Project to Find Ways of Using Blood Tests to Detect Breast Cancer

A team of doctors and scientists here in Sydney are conducting a study to find new ways to detect breast cancer using a blood test. Many different kinds of blood tests are being studied to detect cancer; our study is about looking at the fats and oils in blood, which is different to many other studies. When you eat a meal, the fats and oils in your blood change, so we are seeking women who may wish to participate in the study to donate a blood sample before they have eaten in the mornings (a fasting blood sample).

If you are interested, please contact the team at info@bcaldiagnosics.com.

Research team:

Professor Mary Rickard

Dr Wendy Vincent, Director of NSW BreastScreen

RPAH

Dr Cindy Mak, Director of Breast & breast surgeon at Chris

O'Brien Lifehouse

A/Prof Sanjay Warriar, Breast Surgeon at Chris O'Brien Lifehouse

Dr Amani Batarseh, Chief Scientist at BCAL Diagnostics.

In partnership with The NSW Health Statewide

Biobank and NSW Health Pathology
